DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-3, drawn to a method for treatment for pythiosis, classified in class 514, subclass 2.
 - II. Claims 4-12, drawn to a method for treatment for pythiosis, classified in class 514, subclass 2.
 - III. Claims 13-19, drawn to a method for providing an injectable vaccine, classified in class 530, subclass 412.
 - IV. Claims 20-25, drawn to a method of testing a response in a mammal, classified in class 436, subclass 512.
 - V. Claims 26-32, drawn to a mammal model, classified in class 436, subclass 807.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-IV and are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation, different functions and different effects/results. Although Inventions I and II are both methods for treatment for pythiosis, the Inventions have different parameters and steps.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for one Group is not required for another Group, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
